We create chemistry

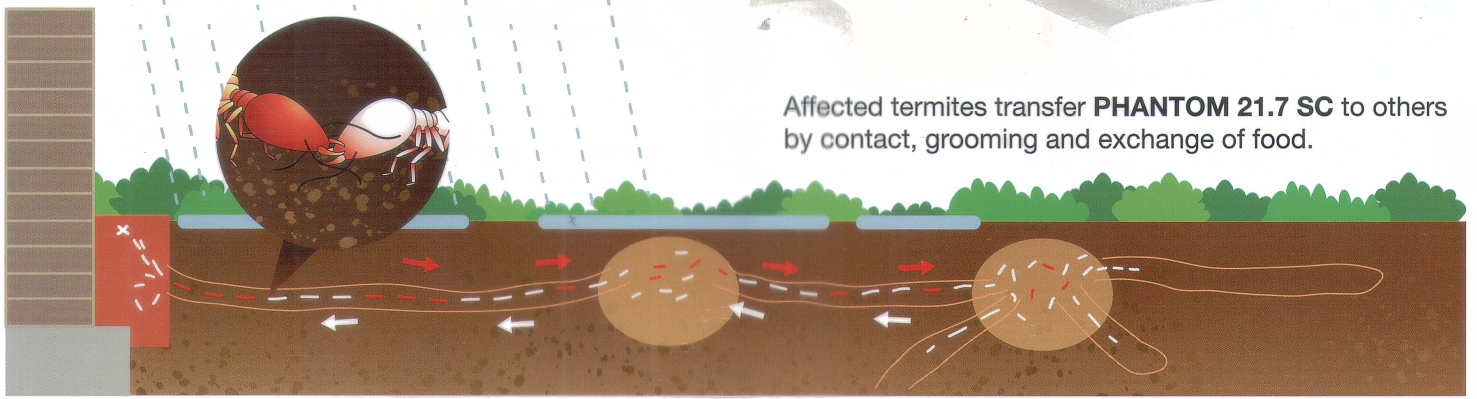

## PHANTOM 21.7 SC Non-repellent & Genuine Transfer Effect™ Suitable Solution for Termite's Control

The crucial advantage of **PHANTOM 21.7 SC** is that it does not repel termites. Termites can detect repellent chemicals in the soil and stay away from them.

With **PHANTOM 21.7 SC**, termites cannot detect the treated zone therefore, as they continue to forage through the soil, they unknowingly come into contact with **PHANTOM 21.7 SC**.

Affected termites cannot detect **PHANTOM 21.7 SC**, they carry it back to the nest on their bodies and pass it on to other termites, hence eliminating the whole termite's colony.

**PHANTOM 21.7 SC** is relatively slow-acting on individual termites. This means affected termites have ample of time to spread **PHANTOM 21.7 SC** to their nest, and the entire colony before dying. The combination of **PHANTOM 21.7 SC** being undetectable in the soil and its Transfer Effect™ helps to achieve total control.

Affected termites transfer **PHANTOM 21.7 SC** to others by contact, grooming and exchange of food.

### Soil Binding, Water Solubility and Airborne Residual

**PHANTOM 21.7 SC** binds strongly to the soil and if the soil is not disturbed, stays in place where it is applied. Termites from other colony will also be eliminated when they cross **PHANTOM 21.7 SC** treated area.

High rainfall or flooding will have minimum impact on duration of control because **PHANTOM 21.7 SC** is less soluble. It also has no airborne residue.

### Professional Certified Applicator

**PHANTOM 21.7 SC** applicators are trained and certified by BASF to deliver the best service for your termites problem.

- **PHANTOM 21.7 SC** Certified Pest Control Operator will start thorough inspection for active termites throughout the property
- If active termites detected:
  - Pest control operators will map out infestation and measure property size to identify number of holes require.
  - Distance between holes recommended for **PHANTOM 21.7 SC** is 1.5 feet apart.
- If active termites are detected outside of the premise, soil drenching is required
